

Streaming Networks with VLC

Jean-Paul Saman
jean-paul.saman@m2x.nl

- Jean-Paul Saman
 - 2001 member of VideoLAN team
 - PDA port (familiar linux distro)
 - H3600/3800/3900
 - VideoLAN server
 - Remote OSDmenu
 - DVB-C/S/T
 - DV camcorder

- M2X is specialized in
 - Multimedia,
 - Embedded and
 - Networking solutions
 - using Open Source software.

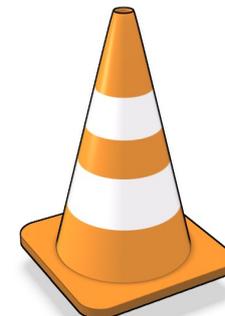

- VideoLAN project history
 - 2001 first release under GPL
 - 2003 VLC becomes a streamer
 - Complete multimedia client and server streaming solution

- VideoLAN deliveries:
 - VLC media player
 - Multimedia Player and Streamer
 - Version 0.8.5 has > 17 million downloads
 - Libdvdcss
 - Libdvbpsi
 - X264 (h264 encoder)

- VLC media player
 - Modular plugin architecture
 - Translated to more than 30 languages
 - Inputs (network, file, PVR cards, DVB, DVD, video4linux)
 - Codecs (MPEG 1/2/3/4, h264, wmv 1/2/3, QuickTime, OggVorbis, Theora, Dirac, 3GPP)
 - OS (MacOS X, Beos, Linux, Win32, *BSD, Solaris)

- Commercial products
 - Freebox (IPTV company)

- Google

- Di.com

- Neuf.tv (IP TV company)

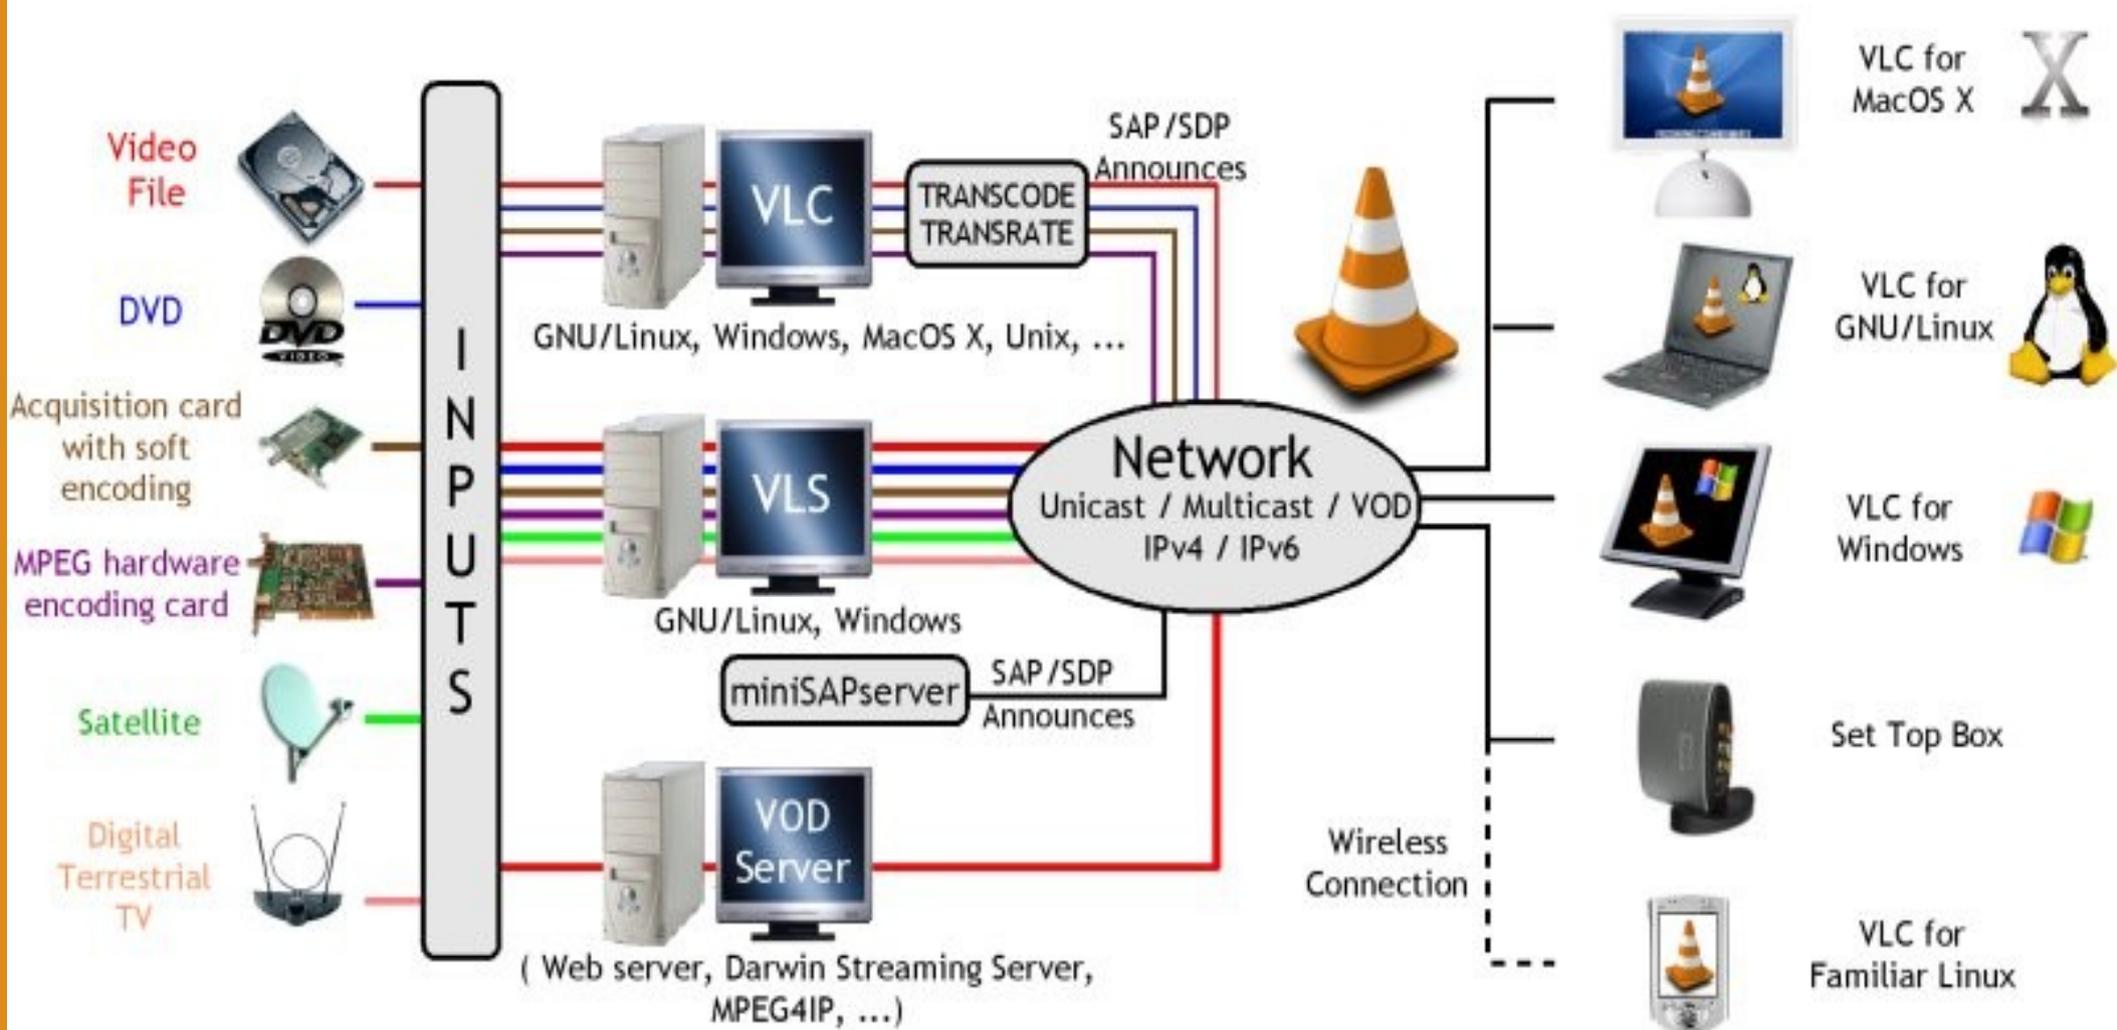

- Support for IPv4 and Ipv6 networks
 - Small networks (SOHO)
 - 10 – 100 Mbits/sec
 - Coporate networks (LAN)
 - 100 – 1000 Mbits/sec
 - Large networks (WAN)
 - > 1000 Mbits/sec

Streamers

Clients

- Support various inputs
 - DVD
 - DVB C/S/T/(H)
 - Cable
 - Satellite
 - Terrestrial
 - Handheld
 - HW encoders (Acquisition cards)
 - Files and fifos
 - DV Camcorders/Webcams

- Streaming types
 - Unicast
 - Connection per client
 - Broadcast
 - Everybody gets the same
 - Multicast
 - Everybody gets the same on request
 - Video On Demand
 - On user request

- Unicast

- Network protocol

- UDP

- RTP

- Example:

- server:

- ```
vlc dvd:///dev/dvd -sout
```

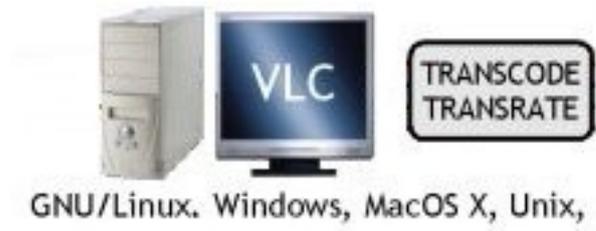

- ```
'#std{access=udp,mux=ts,dst=192.168.0  
.30}'
```

- as client:

- ```
vlc udp://
```

# M2X

MULTIMEDIA 2 UNIX

- Broadcast

- Network protocol

- UDP

- RTP

- Example:

- server:

- `vlc file.mpg –sout`

- `‘#std{access=udp,mux=ts,dst=192.168.0`  
`.255}’`

- as client:

- `vlc udp://`

# M2X

MULTIMEDIA 2 UNIX

GNU/Linux, Windows, MacOS X, Unix,

- Multicast

- Network protocol

- UPD / RTP

- Need multicast route and network equipment

- Example:

- server:

- ```
vlc file.mpg -ttl 3 -sout
```

- ```
'#std{access=udp,mux=ts,dst=239.255.255.184}'
```

- as client:

- ```
vlc udp://@239.255.255.184:1234
```

- Need multicast route:

```
$> /sbin/route add -net 224.0.0.0 netmask 240.0.0.0 dev eth0
```

```
$> /sbin/route
```

Kernel IP routing table

| Destination | Gateway | Genmask | Flags | Metric | Ref | Use | Iface |
|------------------|---------------|------------------|----------|----------|----------|----------|-------------|
| 192.168.0.0 | * | 255.255.255.0 | U | 0 | 0 | 0 | eth0 |
| 169.254.0.0 | * | 255.255.0.0 | U | 0 | 0 | 0 | eth0 |
| 224.0.0.0 | * | 240.0.0.0 | U | 0 | 0 | 0 | eth0 |
| default | 192.168.0.250 | 0.0.0.0 | UG | 0 | 0 | 0 | eth0 |

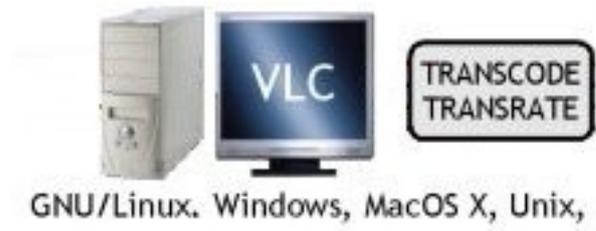

Multicast ip-addresses

- 224.0.0.0/24 LAN protocol traffic between routers and switches
- 224.0.1.0/24 Internet protocol traffic between routers and switches
- 224.0.2.0 – 238.255.255.255 DON'T USE
- **239.0.0.0 – 239.255.255.255 Addresses for local use within a domain**

M2X

MULTIMEDIA 2 UNIX

- Video On Demand
 - Network protocol
 - RTSP
 - HTTP
 - MMS
 - Example:
 - server:
vlc -I telnet --rtsp-host 0.0.0.0:5554
 - as client:
vlc rtsp://192.168.0.5:5554/stream

- Video On Demand

- Network protocol

- RTSP
 - HTTP
 - MMS

- Example:

- Server:

- ```
vlc file.ogg -sout
```

- ```
'#std{access=http,mux=ogg,dst=0.0.0.0:8080}'
```

- as client:

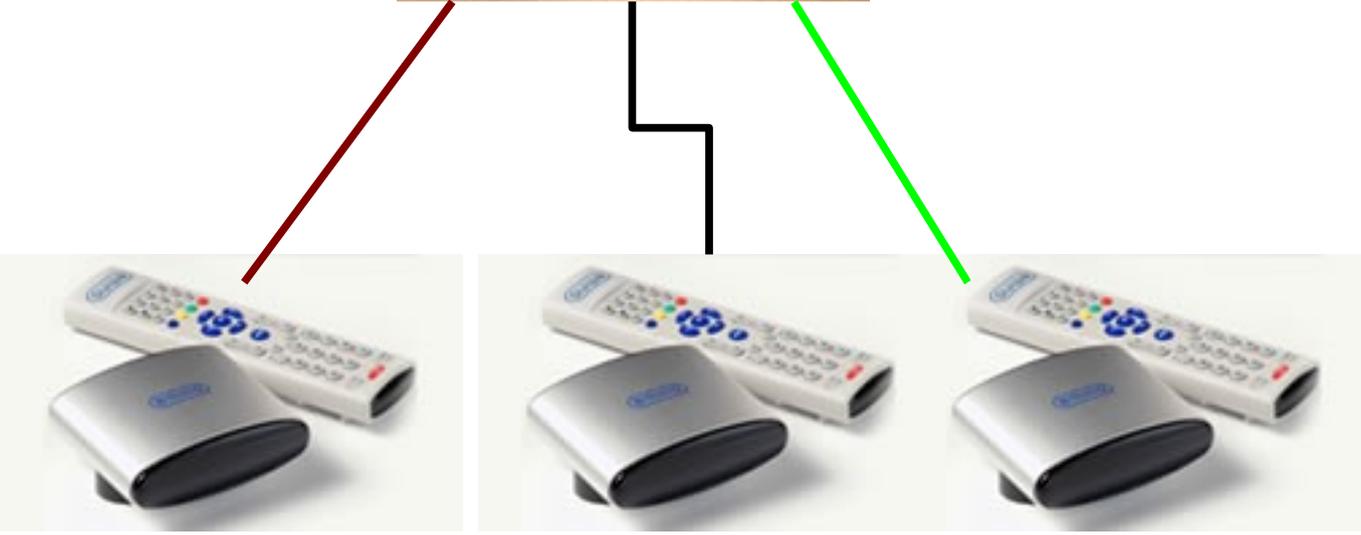

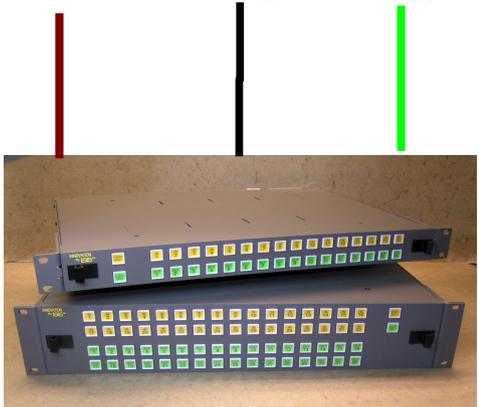

- ```
vlc http://localhost:8080/
```

# M2X

MULTIMEDIA 2 UNIX

GNU/Linux. Windows, MacOS X, Unix,

- Video On Demand
  - VLC is able to announce its streams using:
    - SAP/SDP standard, or
    - Zeroconf (also known as Bonjour).

- Bandwidth
  - Network bandwidth
    - NIC max 100 Mb/s
    - Max load 80%
  - Multimedia bandwidth
    - Depends on encoder settings
    - Type of input source (file, dvb, dvd, encoder card, vcd, etc.)

- Network bandwidth
  - Rule of thumb 75-80% of NIC is available
  - Measure
    - Iperf (network throughput tester)
    - Iptraffic (shows used bandwidth)
  - Speed of NIC
    - Full duplex mode
    - Autonegotiation = no
    - Max speed (eg: 100 Mbit/s)

- Multimedia bitrate
  - MPEG-4 stream: 0.5 to 4 Mbit/s
  - MPEG-2 stream: 3 to 4 Mbit/s
    - from a satellite card,
    - digital television card,
    - MPEG-2 encoding card.
  - DVD: 6 to 9 Mbit/s
  - HD: 10 Mbit/s and up
  - Files: < 1 Mbit/s
  - Webcams: < 1 Mbits/s

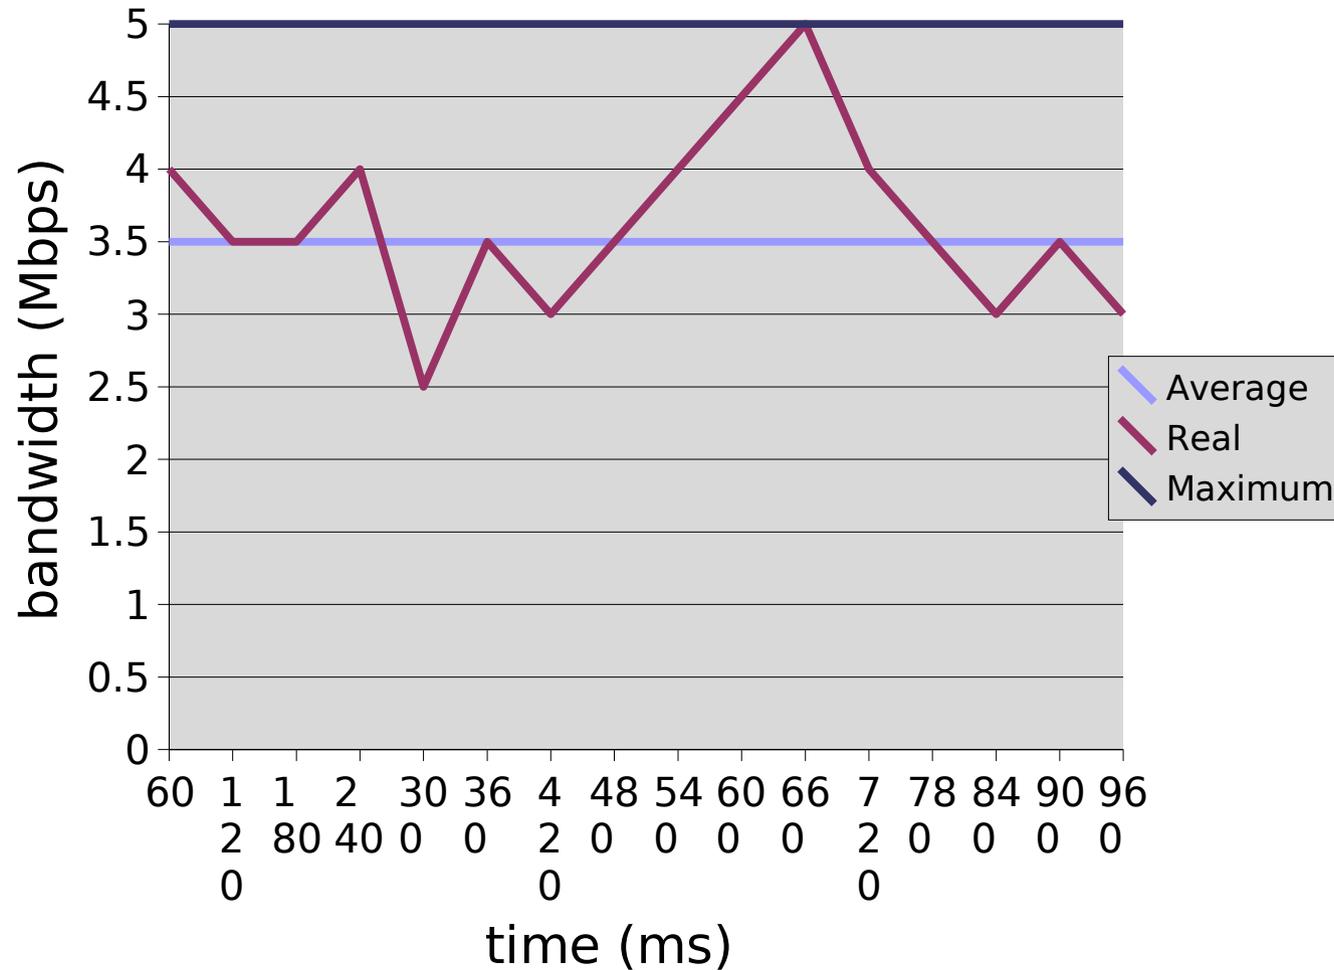

- Bitrate terminology
  - Constant Bitrate (CBR)
  - Variable Bitrate (VBR)
    - Encoder encodes video frames into I, P or B frames
    - A stream consists of a sequence of I, P or B-frames with timestamps attached
    - Example for MPEG2-TS:

IPBBPBBBBPBBP

## Multimedia stream bandwidth

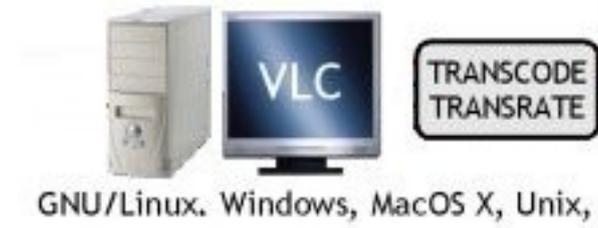

- Network troubles
  - Check logs
  - Keep it simple (test on localhost first)
  - Disable firewalls
  - Check network traffic
    - Wireshark/Ethereal
    - Tcpdump
      - Tcpdump -i eth0 port 1234

# M2X

MULTIMEDIA 2 UNIX

Filter:  + Expression... Clear

| No. - | Time     | Source        | Destination        | Protocol | Info            |
|-------|----------|---------------|--------------------|----------|-----------------|
| 1     | 0.000000 | Dell_69:b7:58 | Spanning-tree-(for | STP      | Conf. Root = 32 |
| 2     | 1.995923 | Dell_69:b7:58 | Spanning-tree-(for | STP      | Conf. Root = 32 |
| 3     | 3.991774 | Dell_69:b7:58 | Spanning-tree-(for | STP      | Conf. Root = 32 |

```

- VLC stream output modules
  - Standard
  - Transcode
  - Duplicate
  - Mosaic\_bridge
  - Bridge
  - Rtp
  - Es
  - display
  - dummy

- Transcoding
  - Decoding audio/video from one format and encode it into another format
    - Video: MPEG-1/2/4, Divx 1/2/3, WMV 1/2, H264, MJPEG, Theora, ...
    - Audio: MPEG layer 2/3, AC3, MPEG-4, Vorbis, Flac, Speex, Faad2, Ogg, ...

- Transcoding

- Decoding audio/video from one format and encode it into another format

- Example:

```
vlc file.avi -sout
```

```
'#transcode{vcodec=mp2v,vb=1024,acodec=mpga,ab=192,channels=2}:
```

```
std{access=udp,mux=ts,dst=192.168.0.15}'
```

- Mosaic

- Uses fake: input module

- Example:

- Server:

```
vlc -I telnet -vlm-conf mosaic.conf -ttl=3 -
 mosaic-width 360 -mosaic-height 288 -
 mosaic-keep-picture -mosaic-rows 2 -mosaic-
 cols 2 -mosaic-position 1 -mosaic-order 1,2,3
 fake: --fake-file=v3-wallpaper_1280x1024.jpg
 --fake-fps=25.0 --fake-aspect-ratio="4:3"
```

as client:

```
vlc udp://
```

- Vlm-conf file “mosaic.conf”

```
new channel1 broadcast enabled
```

```
setup channel1 input udp://@239.255.2.60:1234
```

```
setup channel1 output #duplicate{dst=mosaic-
 bridge{id=1,height=144,width=180},select=video,dst=bri
 dge-out{id=1},select=audio}
```

```
....
```

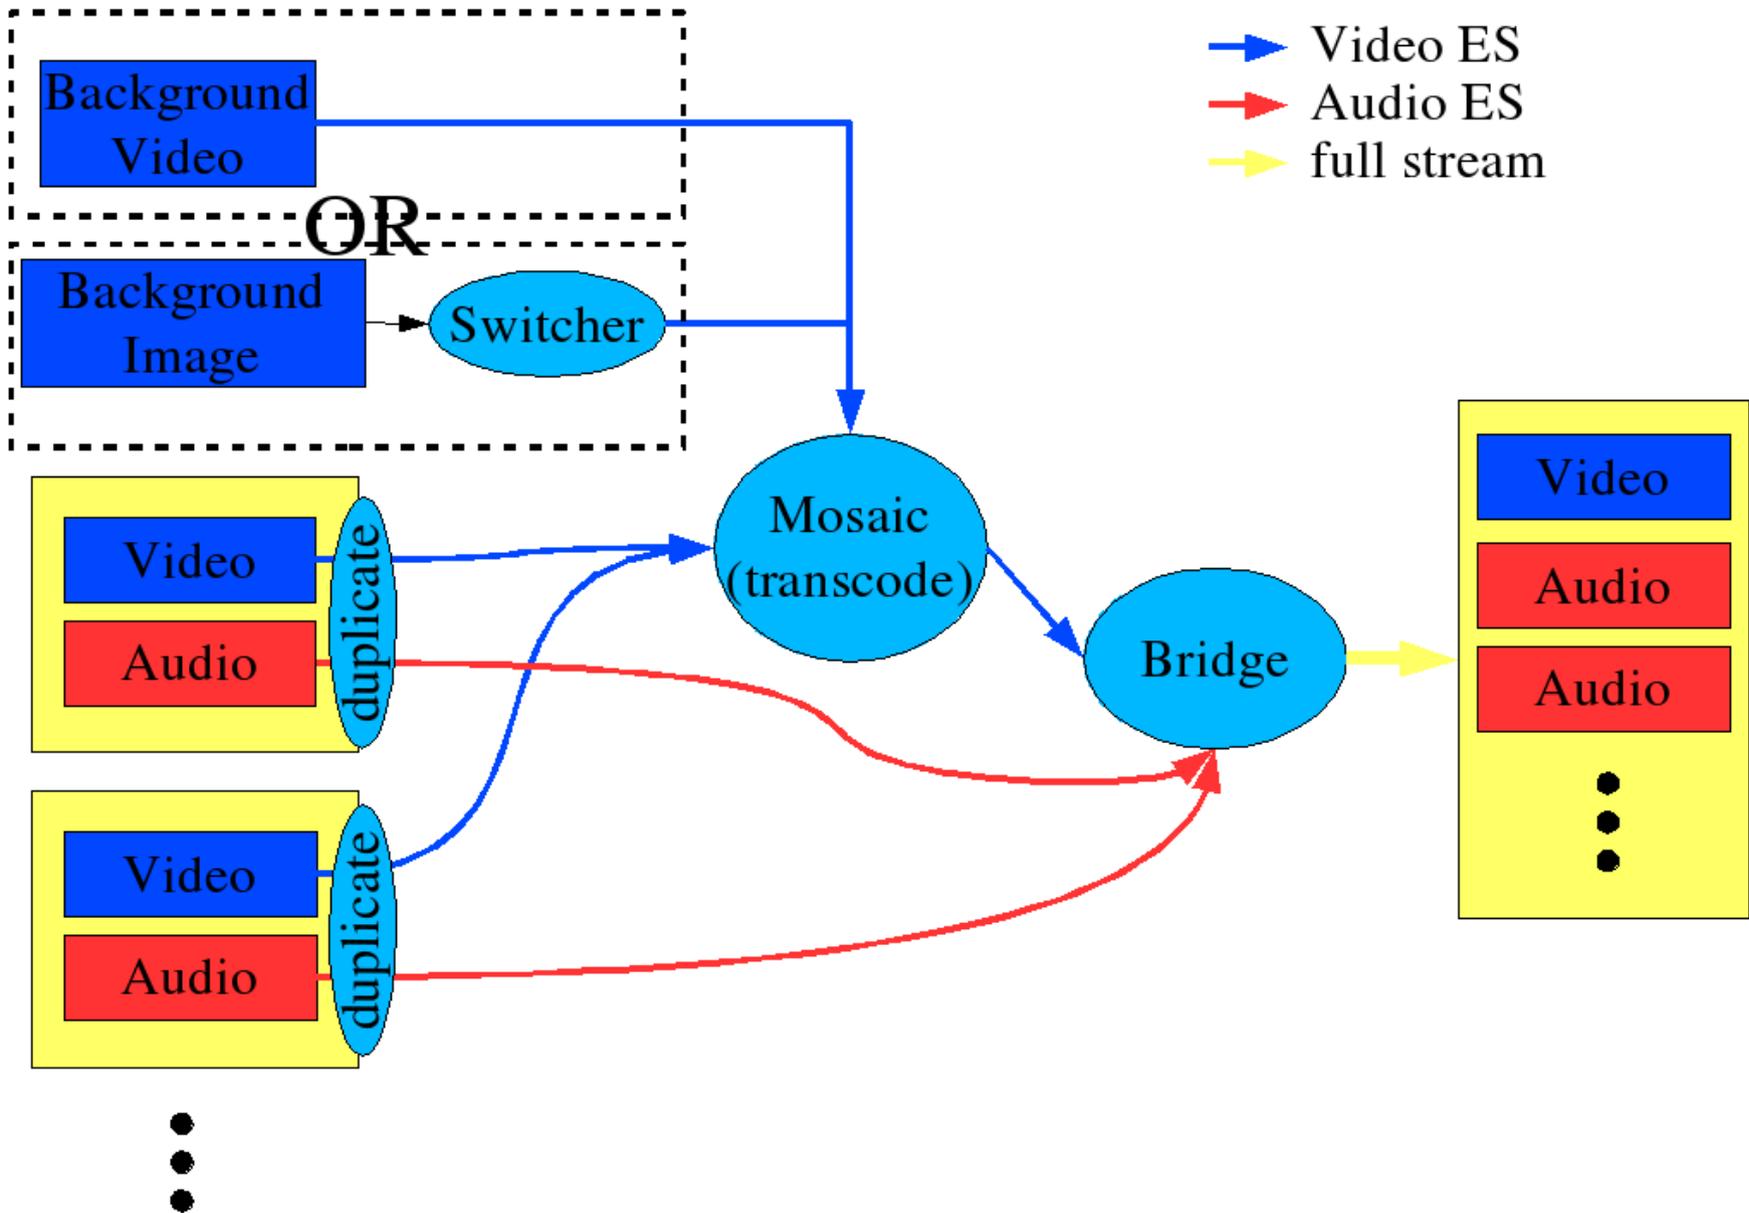

```
new background broadcast enabled
```

```
setup background input fake:
```

```
setup background output
 #transcode{sfilter=mosaic,vcodec=mp2v,vb=10000,scale
 =1}:bridge-in{delay=400,id-
 offset=100}:standard{access=udp,mux=ts,url=239.255.1
 2.42,sap,name="mosaic"}
```

```
control background play
```

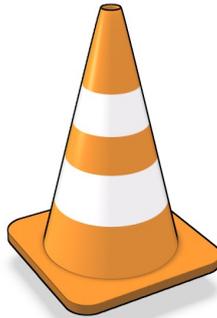

```
control channel1 play
```
